

Drainage – Cardiff Millennium Stadium

Project details:

Lytag[®] 2/8 lightweight aggregate was used in the bottom of the turf trays to provide good drainage properties, however the absorbed moisture is released slowly back into the soil. The thermal characteristics of the Lytag[®] LWA also assisted in the movement of warm air under the turf to enable the surface to be use in cold conditions.

Project:
Cardiff Millennium Stadium

Date:
June 2004

Client:
Cardiff Millennium Stadium

Main Contractor:
Inturf
