

Precast – Crèche for The Elms Hotel

Project details:

The Crèche was installed on 24th May 2007. It was delivered in three off-site pre-constructed sections and is highly energy efficient being constructed on a Lytag[®] lightweight aggregate concrete base providing thermal and acoustic insulation, and with solar thermal water heating. The design and construction are all carried out by Future Generations.

Future Generations are the UK's only design led Volumetric Modular Building Supplier offering custom designed buildings frames in stainless steel and solid concrete floors.
